

SDD-400 SERIES

**DIN-Rail MOUNT
2,3,4,OR 6 LINE**

SURGE SUPPRESSOR

FEATURES:

- ▶ Designed for equipment used in 4-20 mA control/monitor loops and communication networks.
- ▶ Protection of a concentrated data line installation is practical due to the vertical universal mounting on any standard DIN-Rail.
- ▶ Fast, direct wire termination to secure wire clamp terminals.
- ▶ Exceeds severity level 4 of IEC/EN 61000-4-4 (Provides 10 kA/line of surge protection).
- ▶ Space efficient protector is hermetically sealed and suitable for the most harsh environments.
- ▶ Used on analog and digital signal/data lines.
- ▶ Unique multi-stage design provides the most effective suppression available and requires no additional secondary protection.
- ▶ Automatically resets after each transient. No maintenance is required.
- ▶ Sub nanosecond response time stops failures due to lightning, spikes and over-voltage surges while minimizing other electrical noise.
- ▶ Enclosure foot grounded to DIN Rail, and additional ground post provided.
- ▶ UL Listed to UL497B. UL File E205158.

Applications:

The SDD-400 Series is designed to protect measurement and process control equipment, 4-20 mA loop instrumentation, data processing instrumentation equipment and telecommunication equipment, etc. This Series may be used on analog or digital signal/data lines, RS-422, RS-485 and RS-232 lines.

Select the model SDD-402 for 2 line applications, SDD-403 for 3 line applications, SDD-404 for 4 line applications, or SDD-406 for 6 line applications. Select the model according to the operating voltage found on the reverse side of this data sheet.

Select the SDP-120 for DIN-Rail 120VAC line protection.

Typical Installation:

Mount the SDD-400 Series suppressor on any standard DIN-Rail. Connect each incoming line pair to the suppressor as indicated. Connect the facility "clean" line pair(s) to the equipment and dress away from incoming lines. The suppressor must be connected to a good earth ground. Keep the ground wire (#12 AWG or larger) short and place the suppressor as near the equipment it is to protect as possible. Equipment ground and suppressor ground should be common.
